F 7th Postgraduate Forum on Health Systems and Policies  
Phitsanulok, Thailand. 24-25 June 2013

### Background

were analysed using SPSS version 22.0.

EIR procedure were consumables (RM2782, 77%), for Medical Nuclear and MRI procedures, cost of equipment was the highest component which was RM875 (50%) and RM797 (60%), respectively. For CT scan procedures, cost

### Results

The five highest costs of radiological procedures had been identified. The highest mean cost procedures were Endovascular Interventional Radiology (EIR) (RM2214±1636), followed by Medical Nuclear (RM1741± 908), Magnetic Resonance Imaging (MRI) (RM1323±232), Computed Tomography (CT Scan) (RM395±152) and Mammogram (RM322±4). In addition, the highest component cost for
