1. The first part of the document discusses the importance of maintaining accurate records of all transactions. This is essential for ensuring the integrity of the financial statements and for providing a clear audit trail. The records should be kept up-to-date and should be easily accessible to all relevant parties.

2. The second part of the document outlines the various methods used to collect and analyze data. These methods include interviews, surveys, and focus groups. Each method has its own strengths and weaknesses, and it is important to choose the most appropriate method for the specific research objectives.

3. The third part of the document describes the results of the data collection and analysis. The results show that there is a significant correlation between the variables being studied. This finding is consistent with the hypotheses that were tested in the study.

4. The fourth part of the document discusses the implications of the findings for practice. The results suggest that there are several key factors that influence the outcome of the process being studied. These factors should be taken into account when designing and implementing the process.

5. The fifth part of the document provides a conclusion and a list of recommendations for future research. The conclusion is that the study has provided valuable insights into the process being studied, and the recommendations are based on the findings of the study.

#### Acknowledgements

We acknowledge the support of WHO country Office for their encouragement and continued guidance. We also appreciate the support of Kano Polio Emergency Operation Centre and State Primary Health Care Management Agency.

#### Funding

Publication of this article was sponsored by the grant from WHO, Nigeria country office.

#### Availability of data and materials

The data sets analyzed during this study is available from Kano State Polio Emergency Operations Centre, Ministry of Health Kano, Kano State. The data is available from Imam Wada Bello.

#### About this supplement

This article has been published as part of BMC Public Health Volume 18 Supplement 4, 2018: Experiences and lessons learned in polio eradication in Nigeria. The full contents of the supplement are available online at <https://bmcpublichealth.biomedcentral.com/articles/supplements/volume-18-supplement-4>.

#### Authors' contributions

BA was the lead author, participated in data analysis and wrote the drafts. PN and SA supported in formulating the study design and reviewed the initial drafts. FB, CK, USA, and FS participated in the development of health facility and cold store questionnaires. KIG supported advocacy data collection. SB reviewed and participated in the analysis of data on advocacy. IWB provided the data on switch validation. SH participated in training of monitors and field supervision of health facility data collection. AM and AN participated in the review of the manuscripts. RB and SGT reviewed the draft, participated in data analysis and tracked the implementation of editors' corrections of the drafts. All authors read and approved the final manuscript.

#### Ethics approval and consent to participate

Not Applicable.

The data analyzed for this study was collected as part of the Synchronized tOPV/bOPV switch implementation by the Kano state ministry of health. Selected facilities were visited by the validators to collect the relevant information pertaining to the switch, including interviews with health workers. The Kano State Ministry of Health Ethics Committee on Research considered that the study does not involve human or animal samples, invasive or any other manipulative procedures.

#### Consent for publication

Not applicable

Data does not include identifiable individual information (names, pictures etc). The health workers freely participated as part of program information collection to be analyzed and used.

#### Competing interests

The authors declare that they have no competing interests.

#### Publisher's Note
